9. Februar 2007

Einladung

Im Rahmen der Mathematischen Gesellschaft und des Kolloquiums für Stochastik spricht

Prof. Peter Kim

University of Guelph, CA

über das Thema

On the Statistics of Hermann Weyl and Harish-Chandra

Der Vortrag findet statt am

Donnerstag, 22.02.07 um 14.15,

im

Sitzungszimmer des Mathematischen Instituts, Bunsenstr.3-5

Es laden ein: die Mathematische Gesellschaft und das Instituts für Mathematische Stochastik

Abstract:
To say the least, the works of Hermann Weyl and Harish-Chandra have had profound consequences in the development of mathematics. To some degree, their works are also apparent in statistics, however, due to the fact that most of statistics take place in a commutative setting, their profound non-commutative results are somewhat hidden. In this talk, we will assume non-commutativity, and by doing so, we will demonstrate their contributions to statistics.

Im Anschluss an den Vortrag wird Kaffee und Tee gereicht.
